CHAIRMAN'S STATEMENT

The world phosphate reserves are limited and non-renewable; thus, it should be utilized with effective, optimal and sustainable mining procedures. Eppawala phosphate deposit is a valuable natural phosphate reserve in Sri Lanka with 33-40% of P₂O₅, considered to be one of the richest and unique phosphate deposits in the world.

As per the recent publication done by Geological Survey and Mines Bureau (GSMB), the deposit is estimated to be 31.5 million metric tons (minable) of phosphate. With the current annual production of 50,000 mt of Rock Phosphate (ERP), the deposit may last over six hundred years for rock phosphate requirement in Sri Lanka. Currently LPL produces two types of rock phosphate fertilizers namely Eppawala Rock Phosphate (ERP) and High-Grade Eppawala Rock Phosphate (HERP) which are used for perennial crops in the country.

The financial year 2024/2025 ended achieving a gross turnover of Rs.1,215 Million which is a continuous improvement of turnover when compare to the last year of Rs. 1,080 million. The ability to supply of High Grade Rock Phosphate for customers who purchased aiming foreign markets had resulted such remarkable results. At the same time the company recorded an operating profit of Rs. 364.6 million, which is a 52% increase when compare to 239.6 million

operating profit recorded in last year. As a result, LPL would be able to record a PBT of Rs. 465.5 million including the other income of Rs. 100.9million, by the year end.

According to the government policy framework, LPL has to play a leading and crucial role for introducing value added fertilizer for the motherland and save millions of FOREX going out the country.

It has been recognized to produce Single Super Phosphate (SSP), locally, as a substitute for the Triple Super Phosphate (TSP) imported, at the moment. As an initial step, Lanka Phosphate Ltd has signed an agreement with a local party, Lankem Minerals Ltd to sell 36000mts of rock phosphate, annually to manufacture Single Super Phosphate for the local market.

Board of directors are committed to work out solutions to develop the existing as well as new business opportunities for the optimal utilization of Eppawala Phosphate deposit

In conclusion, I greatly appreciate the guidance, encouragement and support extend by Political leadership, Ministry of Industries, General Treasury and Board of Directors for all achievements of Lanka Phosphate Ltd, for the year.

3 SIGNIFICANT ACCOUNTING JUDGMENTS, ESTIMATES AND ASSUMPTIONS

The preparation of financial statements requires the application of certain critical accounting assumptions relating to the future. Further, it requires the management of the company to make judgments, estimates and assumptions that affect the reported amounts of income, expenses, assets and liabilities, and the disclosure of contingent liabilities, at the end of the reporting period. However, uncertainty about these assumptions and Estimates could result in outcomes that require a material adjustment to the carrying amount of the asset or liability in future periods. Hence, actual experience and results may differ from these judgments and estimates.

In the process of applying the company's accounting policies, management has made the following judgments, estimates and assumptions which have the most significant effect on the amounts recognized in the financial statements:

a) Taxation

The company is subject to income taxes and other taxes. Significant judgment was required to determine the total provision for current, deferred and other taxes pending the issue of tax guidelines on the treatment of the adoption of SLFRS in the financial statements and the taxable profit for the purpose of imposition of taxes. Uncertainties exist, with respect to the interpretation of the applicability of tax laws, at the time of the preparation of these financial statements.

The company recognized assets and liabilities for current, deferred and other taxes based on estimates of whether additional taxes will be due. Where the final tax outcome of these matters is different from the amounts that were initially recorded, such differences will impact the income, deferred and tax amounts in the period in which the determination is made.

b) Royalty payment

The company is liable to pay 7% from its determined market value of the mined output (Mill Production) to Geological Survey and Mine Bureau on quarterly basis. Total amount for the year 2024/25 is Rs. 86,742,430.00

c) Useful life-time of the property and equipment

d) Going concern

The Directors have made an assessment of the Company's ability to continue as a going concern and are satisfied that it has the resources to continue in business for the foreseeable future other than the following uncertainty factors

- Supply of raw material is depend on outside short-term agreements and uncertain sources and no researched and excavations had been done to identify alternative mineral deposits.
- Geological Survey and Mines bureau has estimated that the total Eppawala Deposit contain 31 million metric tons of Rock Phosphate. However, since there is no long term agreement with respect to awarding mining rights, there is a possibility of entering other parties also for mining operations, in future.

However, the board is not aware of any such uncertainties at the moment and therefore, the financial statements continue to be prepared on the going concern basis.

e) Post Balance Sheet Events

No post balance sheet events reported which made a significant impact on the results of the company as of 31st March 2025.

f) Impairment losses on financial assets

The Company assesses at each reporting date or more frequently to determine whether there is any objective evidence whether an impairment loss should be recorded in the statement of comprehensive income.

g) Impairment of available for sale investments

The Company reviews its loan given to the share trust classified as available for sale investments at each reporting date to assess whether they are impaired. This requires similar judgment as applied on the individual assessment of loans and advances.

h) Deferred tax assets

Deferred tax assets are recognized for all deductible temporary differences, unused tax losses and tax credits to the extent it is probable that taxable profits will be available against which these losses/credits can be utilized. Significant management judgments are required to determine the amount of deferred tax assets that can be recognized, based on the likely timing and level of future taxable profits together with future tax planning strategies.

i) Defined benefit plans

The carrying value of defined benefit plans is determined using a formula which considers the actuarial assumption. This involves making various assumptions which may differ from actual developments in the future. These include the determination of the discount rate, future salary increases, labour turnover rates, etc. Due to the complexity of the valuation, the underlying assumptions and their long term nature, a defined benefit obligation is highly sensitive to changes in these assumptions. All assumptions are reviewed at each reporting date.

In determining the appropriate discount rate, management considers the yield of Sri Lanka Government bonds with extrapolated maturities corresponding to the expected duration of the defined benefit obligation. Future salary increases are based on expected future inflation rates and expected future salary increase rate of the Company.

The carrying amount of a deferred tax asset is reviewed at each reporting date and reduced to the extent it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be utilised. Unrecognised deferred tax assets are reassessed at each Statement of financial position date and are recognised to the extent that it is probable that future taxable profit will allow the deferred tax asset to be recovered.

Deferred tax assets and liabilities are measured at the tax rate that are expected to apply in the year when the assets are realised or the liabilities are settled, based on tax rates and tax laws that have been enacted or subsequently enacted at the reporting date.

4.4 Non-financial asset

Recognition and measurement

Property, Plant & equipment are recognised if it is probable that future economic benefits associated with the asset will flow to the entity and the cost of the asset can be measured reliably in accordance with LKAS 16 - property, plant & equipment. Initially property, plant and equipment are measured at cost.

Cost model

Property, plant and equipment is stated at cost or revalued amount, excluding the costs of day-to-day servicing, less accumulated depreciation and accumulated impairment in value. Such cost includes the cost of replacing part of the equipment when that cost is incurred, if the recognition criteria are met.

Subsequent cost

Subsequent expenditure incurred for the purpose of acquiring, extending, or improving assets of a permanent nature by means of which to carry on the business or to increase the earning capacity of the business is treated as capital expenditure and such expenses are recognized in the carrying amount of an asset. The costs associated with day-to-day servicing of property plant and equipment are recognized in the statement of comprehensive income as incurred.

Depreciation

Depreciation is calculated using the straight-line method to write down the cost of property, plant and equipment to their residual values over their estimated useful lives. Depreciation begins when the item is available for use. Land is not depreciated. The rates of depreciations based on the estimated useful lives are as follows:

Category of Assets	Depreciation Rate (%)
